Ceramic keepsake with NFC

PROJECT

NFC keepsake web app
Sender portal - Reveal page - Admin

DATE

27 September 2026
Valid 30 days

THE BRIEF

A ceramic envelope with a chip inside, and the letter that lives behind it. A sender claims their unit with a code, fills it with photos, video, a written letter, a voice message and a drawing; the recipient taps the ceramic and the envelope opens on their phone, with no login and no app. Built on Next.js and PostgreSQL, in accounts you own, to still be working in ten years.

THREE PLANS · 30 TO 65 DAYS

PLAN 1	**Saudade Core** · 30 days	P. 09
PLAN 2	**Saudade Complete** · 50 days	P. 10
PLAN 3	**Saudade Growth** · 65 days	P. 11

The moment after the *tap.*

Your brief is unusually complete: a two-sided app, a real database, real hosting, documented code, and a system that still works in ten years because it is tied to something people keep. We agree with all of it, and every plan here is built that way. What a brief cannot specify is the part that decides whether Saudade lands: the two seconds after a phone touches the ceramic.

That is a staging problem more than a technical one. The page has to open before the recipient lifts the phone away, reveal itself once rather than every time, and read as four small worlds on an envelope rather than a dashboard with four tabs. So this proposal separates the system, which every plan includes, from the craft on the reveal page, which is what Complete adds. Section 03 sets out the modules.

Here is what we heard, and how we are reading it

WHERE YOU ARE

A ceramic envelope with a heart stamp and an NFC chip, a first run of 300 units, and four stamp artworks you are drawing yourself. Codes reach buyers two ways: a printed card in the box, or an email when the piece ships straight to the friend. The ceramic and the chips are made and encoded by your supplier; the system only has to hand them the right URL.

WHAT YOU ASKED FOR

A claim page and a private upload portal with no account, four content types each with its own treatment, an in-browser drawing canvas at launch, a reveal page that opens with one tap, and an admin panel you can run support from. Next.js, PostgreSQL, S3, your own accounts, documented. Uploads have to survive a weak signal, and the portal must make sense to someone using it once.

WHAT IS MISSING

Three things still open. Which store the checkout runs on, for the automation in Plan 3. Which domain the claim links and the emails send from. And who writes the privacy and terms wording, since we build and style those pages but do not draft them. Each is answered on the sheet that needs it, starting with section 06. We have assumed Shopify or Stripe and a domain you own; both are cheap to change.

The highest-return item is not on your list: a keepsake outlives its hosting bill. Media sits in a bucket you own, the database is backed up nightly, and every unit's contents can be exported as a folder, so nobody's letter is trapped in our stack or lost to a card that expired.

Four *principles.*

Four principles sit behind every decision in this proposal. The first two are about the moment the gift is opened. The last two are about the ten years afterwards, which is the part a keepsake is judged on.

1 - The tap is the product

Everything else serves the two seconds after a phone touches the ceramic. The reveal page carries no weight it does not need, opens on mobile data in about a second, asks for no login and no app, and plays its reveal once, then settles into something calmer on every visit after that.

2 - Four small worlds, one envelope

Each stamp gets its own treatment, built around your artwork: a gallery with photo-corner detail, a letter set on aged stationery, a voice player made from your motif rather than a grey scrubber bar, and a drawing revealed as a drawing. One shared window with four tabs would be quicker to build, and wrong.

3 - Built to be handed over

Next.js, PostgreSQL and S3 storage, in accounts that are yours from day one. TypeScript throughout, commented, with migrations, a written handover and a walkthrough video, so another developer could pick this up cold. Nothing lives on an account of ours, and nothing needs us to stay switched on.

4 - Boring where it counts

The parts that must survive ten years are deliberately dull: URLs that never change, media in your own bucket, nightly backups, a per-unit export and few dependencies. Novelty belongs on the reveal page, not in the plumbing a keepsake depends on.

> **What we will not claim.** A page that opens without a login can be forwarded. We keep the URL unguessable and out of search engines, serve media through signed links, and can add an optional PIN if you want one, but a recipient who shares the link shares the letter. That is the cost of “just tap”, and it is written into the terms.

Scope of *work.*

Six delivery modules, and every plan includes all six: a sender claims a unit and fills it, a recipient taps and opens it, and you run it from an admin panel. What each plan adds is on its own sheet in section 07 and side by side in section 08.

MODULE 01 CORE

Codes and claiming

- ✓ Human-friendly code format
- ✓ No ambiguous characters
- ✓ Printed card or emailed code
- ✓ Rate-limited against guessing
- ✓ Clear invalid and used states

MODULE 02 CORE

The upload portal

- ✓ Private link, no password
- ✓ Edit before or after sending
- ✓ Autosave on every change
- ✓ Live preview of the reveal
- ✓ Mobile-first, phone tested

MODULE 03 CORE

The four stamps

- ✓ Photos and video in one gallery
- ✓ Letter on aged stationery
- ✓ Voice recorded in the browser
- ✓ Drawing as its own stamp
- ✓ Your artwork, your palette

MODULE 04 CORE

The reveal page

- ✓ Opens straight from the tap
- ✓ No login, no app, no download
- ✓ Four stamps on one envelope
- ✓ Sender edits appear live
- ✓ Fast on mobile data

MODULE 05 CORE

The admin panel

- ✓ Every unit and its live status
- ✓ Search by code, order or email
- ✓ Assign and email codes by hand
- ✓ Re-issue or reset a lost code
- ✓ Moderate content, export a CSV

MODULE 06 CORE

Foundation and handover

- ✓ Next.js, PostgreSQL, S3 + CDN
- ✓ 300 codes and a URL CSV
- ✓ NTAG213 and 215 compatible
- ✓ Nightly automated backups
- ✓ Docs, video, repo transfer

The one thing we cannot supply: the artwork. The four stamps and the heart motif are yours, and the aesthetic stays yours. Send them as SVG or transparent PNG and every treatment is built around them; until they arrive we build on placeholders in your palette.

How it fits *together.*

One application with three front doors: the sender's portal, the recipient's reveal page and your admin panel. All three share one database and one media bucket, so an edit a sender makes on a Tuesday is on the reveal page the moment they save it.

SENDER · CLAIM AND PORTAL

Fill the envelope

A private link, no account.

RECIPIENT · ONE TAP

Open the envelope

No login, no app, no download.

ADMIN · YOUR DASHBOARD

Run it and support it

Units, codes, content, exports.

Saudade app · Next.js and TypeScript

Claiming, token links, uploads, reveal pages and the admin panel, with rate limits on every public route and signed links for every file.

YOUR OWN ACCOUNTS
NIGHTLY BACKUPS

Units, codes, content

S3 + CDN
Photos, video, audio

Email
Claim links

NFC chips
Short unit URLs

Store webhook
Growth only

The life of one unit, from the batch to the tap

STATE	WHAT IT MEANS	HOW IT MOVES ON	WHERE YOU SEE IT
Unassigned	A code exists, tied to no order.	You assign it, or Growth does.	Pool count on the dashboard.
Assigned	The code belongs to an order.	The buyer enters it to claim.	The unit row, with its order.
Claimed	The buyer holds a portal link.	They add their first content.	Claim date on the unit.
Filled	Photos, letter, voice, drawing.	The gift is given and tapped.	A preview of what is inside.
Opened	Tapped at least once.	Nothing: edits still appear live.	First-tap date on the unit.
Exported	Everything saved as a folder.	Only you, from the panel.	The export file and a log.

Security is in every plan, not an extra. Single-claim codes, rate limits, token links instead of passwords, signed media URLs, pages kept out of search, an admin login and nightly backups.

Four journeys, step by *step.*

The sender's path from a code to a filled envelope, the recipient's from a tap to a letter, and the two you will run yourself. Every step works in every plan unless it names one.

SENDER **Code to filled envelope** 10 steps · every plan	01 **Buy** A code on a card, or by email.	02 **Claim** Enter the code on the site.	03 **Portal** A private link, no password.	04 **Photos** Up to 25, dragged to order.	05 **Video** Two minutes, compressed.
	06 **Letter** Typed, set as handwriting.	07 **Voice** Recorded in the browser.	08 **Drawing** Uploaded, or sketched.	09 **Preview** Exactly what they will see.	10 **Return** Edit any time, after too.
RECIPIENT **Tap to letter** 5 steps · every plan	01 **Tap** The chip opens the page.	02 **Reveal** The envelope opens, once.	03 **Stamps** Four worlds, one envelope.	04 **Open** Photos, letter, voice, drawing.	05 **Return** Calmer on the second visit.
YOU **Batch, assign, support** 5 steps · every plan	01 **Batch** 300 codes in one click.	02 **Encode** URL CSV to your maker.	03 **Assign** Email a code for a gift.	04 **Support** Search code, order, email.	05 **Re-issue** A lost code replaced.
AUTOMATION **Order to claim link** 5 steps · Growth only	01 **Order** A sale hits your store.	02 **Webhook** The system takes the order.	03 **Assign** A code leaves the pool.	04 **Email** The buyer gets their link.	05 **Refund** The code returns to the pool.

Nothing here waits on us. Codes, exports, re-issues and content moderation are all yours from the admin panel, and the handover includes a walkthrough video of each one. In Growth, the top three steps of your own lane stop being jobs at all.

The *method.*

Six choices, each made so the system ships on time and stays entirely yours afterwards.

Your accounts
OWNERSHIP

Hosting, database and storage open in your name. Nothing lives on an account of ours.

Data model first
PLATFORM

Units, codes and content are settled in week one; every screen hangs off that shape.

Design before build
APPROVAL

Portal and reveal screens reach you with your stamps in place, before any build.

A link every week
VISIBILITY

A staging link from week two, so you can claim a test unit and fill it yourself.

Tapped on real chips
PERFORMANCE

We write a test chip and tap it on an iPhone and an Android before your encoding run.

Handover, not a handoff
OWNERSHIP

Repository, docs and a walkthrough video, so another developer could pick it up cold.

Timeline: 30 to 65 days to *launch.*

The phases below are the 50-day Complete schedule, the plan we recommend.

01
Discovery
Days 1-8

Data model, code format, screens with your stamps.

You get the design set.

02
Foundation
Days 6-20

Next.js, database, storage, admin skeleton.

You get a staging link.

03
The stamps
Days 16-34

Portal, gallery, letter, voice, drawing.

You fill a test unit.

04
The reveal
Days 28-44

Envelope layout, first-tap moment, speed.

You tap a real chip.

05
Launch
Days 40-50

300 codes, CSV, docs, walkthrough, handover.

You get the encoding CSV.

Where the plans differ in time. Core is the same build without the canvas and the reveal craft: 30 days. Complete: 50 days. Growth: 65 days.

The one date we cannot control: your encoding run. We hand you the CSV of unit URLs before launch; how fast the chips are written and the ceramics packed is your manufacturer's clock, not ours.

PLAN 1 OF 3 - CORE

Saudade *Core.*

$2,700

USD · ONE-TIME · PLUS FIVERR FEE

The whole system, end to end: claim, portal, four stamps, reveal page and admin.

DELIVERY	BUG SUPPORT	YOU RECEIVE
30 days	30 days	The system, end to end

Core is the product working from end to end. A buyer claims their unit with the code from the card or the email, fills the envelope from their phone with photos, video, a letter, a voice message and a drawing, and the recipient taps the ceramic to open a reveal page built around your four stamps. You run all of it from the admin panel, and the 300 codes come back as a CSV ready for your encoding run.

What it does not add is the craft on top. The drawing stamp takes an uploaded sketch rather than an in-browser canvas, and the reveal page ships in a static layout: your stamps and your palette, but no opening animation, no paper textures or postmarks, and one shared treatment behind each stamp.

Codes and claiming

From card or email.

- ✓ A batch of 300 codes
- ✓ Printed card or email
- ✓ Claim page, rate-limited
- ✓ Clear error states
- ✓ Single-claim, re-issuable

Upload portal

No account, no password.

- ✓ A private token link
- ✓ Autosave as they go
- ✓ Edit before or after
- ✓ Live preview
- ✓ Built for phones

The four stamps

Photos, letter, voice, drawing.

- ✓ Gallery with reordering
- ✓ Photos compressed
- ✓ Letter on stationery
- ✓ Record or upload voice
- ✓ Drawing as an upload

The reveal page

Static layout.

- ✓ Opens from the tap
- ✓ Your four stamps
- ✓ One shared treatment
- ✓ Edits appear live
- ✓ Fast on mobile data

Admin panel

Support from day one.

- ✓ Units and their status
- ✓ Search code or email
- ✓ Assign and email codes
- ✓ Moderate content
- ✓ CSV export

Foundation

Yours from day one.

- ✓ Next.js and PostgreSQL
- ✓ S3 storage with a CDN
- ✓ Your own accounts
- ✓ Nightly backups
- ✓ Docs, video, repo

Best for: getting 300 units into people's hands quickly, with the canvas and the reveal craft added later without a rebuild. Every row is compared in section 08.

PLAN 2 OF 3 - COMPLETE · RECOMMENDED

Saudade *Complete.* RECOMMENDED

$4,000

USD · ONE-TIME · PLUS FIVERR FEE

Everything in Core, plus the drawing canvas and the reveal moment.

DELIVERY	BUG SUPPORT	YOU RECEIVE
50 days	3 months	Core + the reveal craft

Complete is the version people will talk about. The sender sketches directly on their phone on a touch canvas and can come back and redraw it. The recipient's first tap plays a reveal: the envelope opens, the stamps settle, and each one opens into its own treatment rather than a shared window, with paper textures, postmarks and perforated edges.

What it does not add is automation. Codes are still assigned and emailed by you from the admin panel, and there are no claim or fill analytics. At 300 units that is a few minutes of work a week.

INCLUDES EVERYTHING IN PLAN 1 (SAUDADE CORE), PLUS THE FOLLOWING

Drawing canvas

Sketched on the phone.

- ✓ Touch-optimised canvas
- ✓ Brush weights and colours
- ✓ Undo, redo, clear
- ✓ Saved and re-editable
- ✓ Revealed as a drawing

The reveal moment

Once, then calmer.

- ✓ An opening animation
- ✓ Stamps settle into place
- ✓ Quiet on return visits
- ✓ Tuned for slow data
- ✓ Tested on real chips

Stamp treatments

Four small worlds.

- ✓ Each stamp its own screen
- ✓ Photo-corner gallery
- ✓ Aged stationery letter
- ✓ Postmarks and textures
- ✓ Perforated edges

Voice player

Your motif, not a bar.

- ✓ Built from your stamp
- ✓ Play, pause and scrub
- ✓ Waveform in your palette
- ✓ Re-record any time
- ✓ Loads only when tapped

Privacy and legal

Quietly hardened.

- ✓ Long, patternless URLs
- ✓ Blocked from search
- ✓ Signed media links
- ✓ Optional PIN on request
- ✓ Policy and terms pages

Priority care

Three months after launch.

- ✓ Priority bug fixes
- ✓ Small tweaks handled
- ✓ Dependency updates
- ✓ Guidance when needed
- ✓ Three months from launch

Best for: a product whose first tap has to feel like opening a letter rather than loading a page. It is the plan we recommend.

PLAN 3 OF 3 - GROWTH

Saudade *Growth.*

$5,200

USD · ONE-TIME · PLUS FIVERR FEE

Everything in Complete, plus automated code delivery, analytics and six months of care.

DELIVERY	BUG SUPPORT	YOU RECEIVE
65 days	6 months	Complete + automation

Growth takes you out of the loop. A webhook fires on every order, a code leaves the pool and the buyer is emailed their claim link within seconds. Gift orders are flagged at checkout so no printed card ships with them, refunds release codes back into the pool, and future runs are generated from the panel in minutes. You also see claim and fill rates, and how many units sit unopened.

What it does not add is a new product. The store itself, its product pages, the printed card design and any marketing stay outside, named in section 09. That suits a first run that is already turning into the next one.

INCLUDES EVERYTHING IN PLAN 2 (SAUDADE COMPLETE), PLUS THE FOLLOWING

Automated codes
You leave the loop.

- ✓ Webhook on every order
- ✓ A code assigned at once
- ✓ Buyer emailed the link
- ✓ Delivery logged
- ✓ Retries if email fails

Gift addresses
No card in the box.

- ✓ Gift flag at checkout
- ✓ Digital code instead
- ✓ Packing list marks it
- ✓ The buyer keeps control
- ✓ The friend sees nothing

Refunds and pool
Nothing is wasted.

- ✓ A refund frees the code
- ✓ Cancellations too
- ✓ Pool count stays true
- ✓ Every change logged
- ✓ No manual clean-up

Batch generation
Runs of any size.

- ✓ Generate from the panel
- ✓ Non-sequential codes
- ✓ URL CSV in one click
- ✓ Ready for encoding
- ✓ Minutes, not a request

Analytics
What is actually used.

- ✓ Claim rate by batch
- ✓ Fill rate by stamp
- ✓ Units still unopened
- ✓ A simple monthly view
- ✓ CSV export

Six months of care
Half a year covered.

- ✓ Priority bug fixes
- ✓ Restore tested and logged
- ✓ Dependency updates
- ✓ Small tweaks handled
- ✓ Six months from launch

Best for: a run of 300 that is already becoming 3,000, where sending codes by hand stops being a few minutes a week.

Plan *comparison.*

Each plan has had its own sheet; here they are side by side. We recommend Saudade Complete at $4,000, because the drawing canvas and the reveal moment are what separate this from a link printed in a card. Prices are one-time, in USD, plus Fiverr's service fee.

✓ included · – not included · each plan heading opens its sheet

What you get	PLAN 1 · P.09 SAUDADE CORE $2,700	RECOMMENDED · P.10 SAUDADE COMPLETE $4,000	PLAN 3 · P.11 SAUDADE GROWTH $5,200

Outside the *fee.*

So the scope leaves no grey areas, this sheet names what no plan includes, what Saudade pays to keep the system running, and what only you can supply. Anything not named in section 03 or on your plan's sheet is quoted before it starts, never added to an invoice afterwards.

Named for later, and not in any plan

ITEM	WHAT IT COVERS	AVAILABLE AS
The store itself	Product pages, checkout, gift-card copy, ads	SEPARATE QUOTE
The physical product	Ceramic, chips and the encoding run	YOUR SUPPLIERS
Legal wording	The privacy policy and terms text itself	YOUR LAWYER
Printed card design	The code card that ships in the box	SEPARATE QUOTE
Recipient accounts	Logins, saved letters, sharing between people	LATER PHASE
More languages	The portal and reveal page in other languages	LATER PHASE
Printed keepsakes	Turning a filled envelope into a printed book	LATER PHASE
Care after support ends	Monitoring, updates and restores	MONTHLY PLAN

Running costs, billed to you

SERVICE	AT 300 UNITS
Hosting Vercel or Render, the app itself	$0-20 a month
Database Managed PostgreSQL	$0-25 a month
Storage and CDN Photos, video and audio	$5-40 a month
Email sending Claim links and receipts	Free at this volume
Domain Your claim and reveal links	About $15 a year
At 3,000 units Same stack, more video	$80-150 a month

Recommended caps: a 2-minute video at 200MB, 25 photos at 10MB, 3 minutes of voice. That keeps a full unit under about 250MB, and every cap is one setting to raise later.

What only you can supply

- ✓ The four stamp artworks and the heart motif, as SVG or transparent PNG
- ✓ The privacy policy and terms wording, from your lawyer or a service like Termly
- ✓ A domain, and DNS access for the claim and reveal links
- ✓ Hosting, database and storage accounts, which we set up with you
- ✓ The NFC encoding run, from the URL CSV we hand you
- ✓ Store admin access, for the automation in Plan 3 only
- ✓ Design feedback by day 8, so the build keeps its date

Your *team.*

Shreyansh Singh, Managing Director, signs this proposal and answers for it from kickoff to handover. The build is carried by our product team across design, Next.js and TypeScript development and testing, drawn from 50+ specialists in five offices, with one project lead as your single point of contact.

What could go wrong, and what we do about it

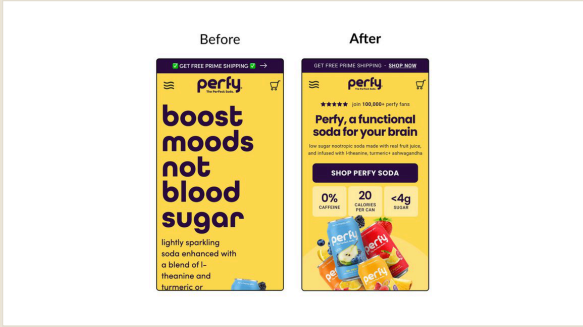

RISK	WHOSE	WHAT WE DO ABOUT IT
Stamp artwork arrives late	Saudade	The build starts on placeholders in your palette; swapping the final artwork in is an afternoon, not a rebuild.
The URL will not fit the chip	Digital Heroes	NTAG213 chips hold little data, so unit URLs are kept short and written to a real chip before your batch run.
A video upload fails on weak signal	Digital Heroes	Uploads are chunked and resumable, compressed in the browser, and the portal autosaves so nothing is lost.
A code is lost, or shared too early	Shared	Codes are single-claim and re-issued in one click; the old one stops working the moment the new one is made.
The keepsake outlives an account	Shared	Media sits in your own bucket, backups run nightly, and every unit's contents can be exported as a folder.

Before, and *after.*

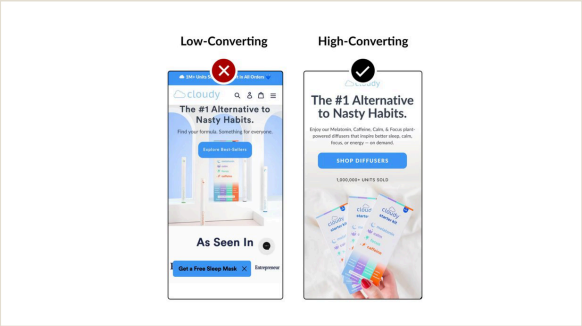

Four rebuilds from our own portfolio: the product stayed the same and the order of the argument changed, which is the same discipline a reveal page needs.

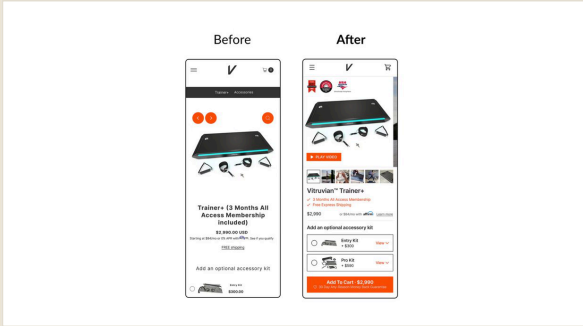

Auto Floor Guard - The hero stopped describing the product and started promising an outcome. Proof above the fold, one button instead of a paragraph.

Perfy - A slogan became a sentence that says what the product is. The numbers a buyer asks about moved up beside the button.

Cloudy - A low-converting hero beside the rebuilt one. Same product, different sequence, offer stated rather than implied.

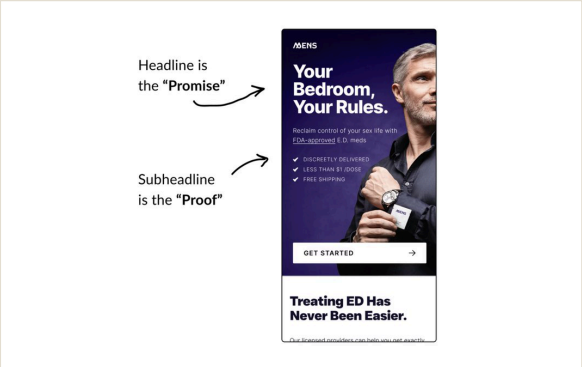

Vitruvian - Product page restructured around the buying decision instead of the product photograph, options priced in the open.

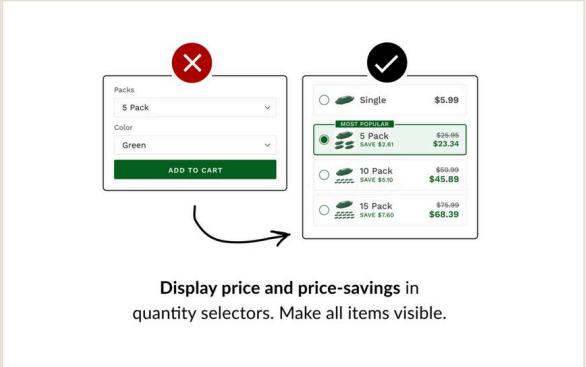

> **Why these matter for Saudade.** None of these is a keepsake, and we will not pretend otherwise. Each is a screen that stopped describing and started showing, which is the whole job of a reveal page: nothing on it should explain itself, because the stamps are the interface and the content is the payoff. The same instinct decides what the portal asks a sender for, and in what order.

The patterns we *repeat.*

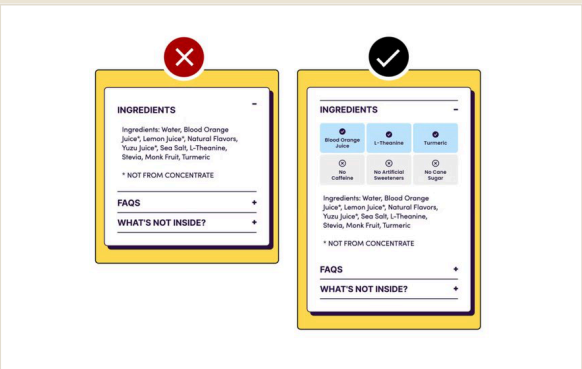

Reverse-engineered from split tests across the products we have shipped. They carry over to a page someone opens once, on a phone, in front of the person who gave it to them.

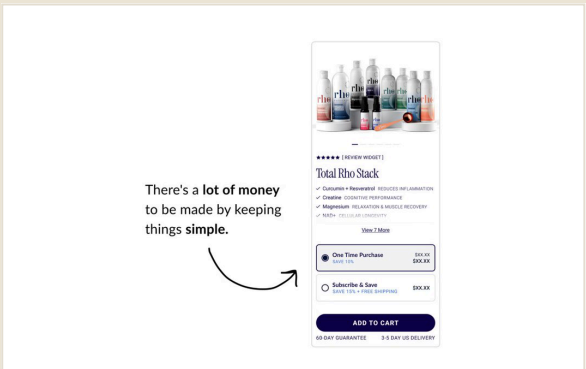

The headline carries the promise and the subheadline carries the proof. The envelope does both at once: it says who it is from before it says anything else.

Options shown openly rather than hidden behind a control. Why the four stamps sit on the envelope rather than in a menu.

Detail made scannable rather than buried in a paragraph. The same discipline the portal needs, so a sender always sees what is in the envelope so far.

Choices simplified. Claim, fill, preview, send: four steps, with nothing else on the screen asking for attention.

Where these land on Saudade. An envelope that says who it is from. Four stamps in the open, not in a menu. A portal that always shows what is already inside. And a reveal that does one thing beautifully, set out screen by screen in section 05.

Verified. Certified. *Proven.*

Acceptance turns into work on the same day: the day you accept is day 1 of the timeline.

01

Accept the offer

Choose a plan and accept its Custom Offer in our Fiverr order thread. The timeline counts from that day.

02

Send the artwork

The four stamps and the heart motif, plus domain and accounts, in week one. Section 09 lists the rest.

03

Approve by day 8

Portal and reveal screens reach you with your stamps in place; your approval fixes the layout.

Terms & *conditions.*

01	**Validity.** This proposal is issued on 27 September 2026 and is valid for 30 days, until 27 October 2026.
02	**Billing.** Saudade Core $2,700, Saudade Complete $4,000 or Saudade Growth $5,200: one-time, in USD, plus Fiverr's service fee. Any plan can instead be split into phases, each delivered complete before the next begins.
03	**Scope.** The six modules in section 03 and the additions of the plan you choose, as set out in section 07 and section 08. Anything beyond them is quoted before it starts.
04	**Timeline.** 30, 50 or 65 days by plan, if artwork and accounts arrive in week one and designs are approved by day 8.
05	**Platform.** Next.js and TypeScript, PostgreSQL, S3-compatible storage with a CDN, deployed to Vercel or Render in accounts you own.
06	**Support.** Bug support runs 30 days, 3 months or 6 months from launch, by plan, and covers defects in what we built. Small tweaks are handled; new features are quoted.
07	**Legal wording.** We build and style the privacy policy and terms pages; the wording comes from your lawyer or a service such as Termly. We do not draft it.
08	**Reveal privacy.** Reveal pages open without a login by design: URLs are long and patternless, kept out of search, and media is served through signed links. A forwarded link opens for whoever holds it.
09	**Your content.** Uploaded photos, video, audio and drawings belong to you and your users, sit in your own accounts, and are covered by the mutual NDA.
10	**Third-party costs.** Hosting, database, storage, CDN, email and domain are billed to you directly, as estimated in section 09.
11	**Changes.** A change to an approved design is quoted before it starts and may move the launch date.
12	**Ownership.** On final payment the source code, designs, database schema and all assets are yours outright, in your own repository and accounts.

Signed & *agreed.*

By signing below, each party agrees to be bound by this proposal, the plan ticked below and the accompanying mutual non-disclosure agreement as of the effective date. It may be executed electronically and in counterparts, and acceptance may be confirmed in the Fiverr order thread.

PLAN CHOSEN · TICK ONE BOX

☐ Saudade Core	☐ Saudade Complete	☐ Saudade Growth
$2,700 · 30 days	$4,000 · 50 days	$5,200 · 65 days
